Hypertext links incorporated into the lesson lectures open pop-up boxes with further explanations and/or definitions of concepts and terms. Links to relevant web sites provide additional resources to enhance learning or stimulate discussion within a cohort group. An extensive glossary of approximately 650 terms provides correct definition for key terms throughout the course. All content has been updated to current industry standards; for use with Step-by-Step Medical Coding, 5th Edition ensuring that students learn from the most up-to-date material available. Each online chapter includes engaging "lesson lectures" by the author, guiding the learner through the online and text content. Recoup lost time and revenue with denials management and appeals know-how. Claim denials can sink a profit margin. And given the cost of appeals, roughly $118 per claim, not all denials can be reworked. A practice submitting 50 claims a day at an average reimbursement rate of $200 per claim should bring in $10,000 in daily revenue. But if 10% of those claims are denied, and the practice can only appeal one, they lose $800 per day—upwards of $200K annually. Your medical claims are the lifeblood of operations. Don't compromise your financial health. Learn how to preempt denials with the Denials Management & Appeals Reference Guide. This vital resource will equip you to get ahead of payers by simplifying the leading causes of denials and showing you how to address insufficient documentation, failing to establish medical necessity, coding and billing errors, coverage stipulations, and untimely filing. Rely on AAPC to walk you through the appeal process. We'll help you establish protocols to avoid an appeals backlog and teach you how to identify and prioritize denials likely to win an appeal. What's more, you'll learn when a claim can be "reopened" to fix a problem. Collect the revenue your practice deserves with effective denials and appeals solutions: Know how to analyze your denials Defeat documentation and compliance issues for successful claims success Utilize payer policy for coverage clues Lock in revenue with face-to-face reimbursement guidance Refine efforts to avoid E/M claim denials Ace ICD-10 coding for optimum reimbursement Put an end to modifier confusion Stave off denials with CCI edits advice Navigate the appeals process like a pro And much more!

These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported.
