A case can be made that the extensive use of air conditioning use in the United States is an excess and poor example to the rest of the world that makes a mockery of the current ideology of energy sustainability including concerns about prevention of global warming. Extension of these wasteful practices to emerging economies (like India) is easily shown to be unsustainable. As with other recalcitrant problems such as over-reliance on cars and poor personal health and dietary habits the source of the problem is found individual moral choices that are championed as individual freedoms but actually representing degenerate morality which yields more

benefit to corporations and big government. The Buddhist ethic provides one path into the heart of human choices illuminating as it does the "incorrect thinking" that underlies bad choices including those that most people think are based on common sense and scientific expertise. This book applies this idea to the matter of air conditioning, using Thailand and like Southeast Asian settings as an example. It claims that emerging western interest in "mindfulness" can be leveraged to introduce new thinking on personal energy use that will go much further to create true sustainability than programs based on "harnessing" geophysical technologies such as solar and wind.

A proliferation of lawsuits involving sport utility vehicles, defective tires, medical devices and drugs, and asbestos abounds. Public attention to products liability cases is at an all-time high, and awards routinely run into the millions of dollars. When developing a strategy in this high stakes world, attorneys can't afford to have anything other than the best information and insight into this evolving area of law. Lawyers need practical tools to assess a products liability case's potential and build their approach, and Shapo on the Law of Products Liability provides the tools to give you the winning edge. Through a holistic analysis of the law and its principal developments as witnessed in hundreds of cases, this treatise gives litigators

the latest in the field, giving readers the most up-to-date guide available, while maintaining the first edition's practical, applied approach to the subject and its accessibility to a wide range of readers. The text provides comprehensive coverage of basic topics in the field, such as stationary phases, packed columns and inlets, capillary columns and inlets, detectors, and qualitative and quantitative analysis. At the same time, the coverage also features key additions and updated topics including: Gas chromatography-mass

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads

to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true

variable speed motor).Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.
