

Financial Management Theory Practice

Continuing the four goals from the first edition, i.e. helping students to make good financial decisions, providing a solid text for the introductory MBA course, motivating students by demonstrating finance is relevant and interesting, and presenting the material clearly, this Tenth Edition promises to be the best yet. Written by a highly-acclaimed, best selling, author team, this text remains the only MBA-level text to present a balance of financial theory and applications. Despite significant financial investments, the rate of development and pace of poverty reduction in developing and transitional countries has not always matched expectations. Development management typically involves complex interactions between governmental and non-governmental organisations, donors and members of the public, and can be difficult to navigate. This volume brings together a group of international contributors to explore the theoretical and empirical underpinnings of development management, and to consider the prospects and challenges associated with it in the context of both developing and transitional countries. Referring to dominant norms and values in public and developmental organisations, development management is tied up with the attitudes and perceptions of various stakeholders including: government officials, public sector managers, aid workers, donors and members of the public. Attempting to make sense of complex interactions between these actors is highly problematic and calls for new approaches, models and insights. Based on cutting-edge research, the chapters challenge much of the previous discourse on the subject and evaluate the challenges and opportunities that it presents. Development Management offers academics, researchers and practitioners of public administration, business and management, international development and political science a comprehensive and state-of-the-art review of current research on development management in the context of developing and transitional countries.

From an Islamic perspective, although the ownership of wealth is with God, humans are gifted with wealth to manage it with the objective of benefiting the human society. Such guidance means that wealth management is a process involving the accumulation, generation, purification, preservation and distribution of wealth, all to be conducted carefully in permissible ways. This book is the first to lay out a coherent framework on how wealth management should be conducted in compliance with guiding principles from edicts of a major world religion.

Commercial Management: theory and practice defines the role of commercial management within project-oriented organisations, providing a framework for and helping to develop a critical understanding of the factors that influence commercial management practice. It also identifies generic aspects of this practice and provides a theoretical foundation to these activities, by reference to existing and emergent theories and concepts, as well as to relevant management best practice.
