Fundamental Accounting PrinciplesCreatespace Independent Publishing Platform

The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience

on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

In recent years there has been increasing interest in the history and development of accounting practices. Accounting records are an important source of historical data, and they can also provide evidence of varied organizational structures and systems of management control. Celebrating the 500th anniversary of Pacioli's *Summa de Arithmetica* (1494), this

volume brings together work by leading British scholars in the field and is an important contribution to accounting scholarship.

Provides an introduction to financial accounting for non-financial managers by way of a transaction-based, business training tool. Includes real-life examples of how financial statements are built and how they interact to present a true financial picture of the enterprise.
