*The first scientifically backed guide to a happy, fulfilling retirement. Over the years, Dr. Fritz Fraunfelder and Dr. Jim Gilbaugh have seen thousands of their patients respond differently to the challenges of retirement: some rose to new heights; others hit new lows. The doctors began to wonder: How do some people maintain their vitality, interests, and zest for life in retirement while others became distant, even depressed? Is there a magic formula for retiring well? To find the answer, they designed a comprehensive study involving more than one thousand patients. The results were surprising but clear. The happiest retirees shared eight key traits; all of them were able to: \* plan ahead \* maintain a positive*

*This book examines the role of computers in language learning and teaching in higher education. In particular, it considers the pedagogical and practical value of designing a language-learning environment around computer technology. Whereas considerable research has already been undertaken in analysing the value of individual computer tools and packages (such as e-mail), the study gives a broad appraisal of their individual and collective value, without being too exhaustive. Using quantitative and qualitative data, based on research visits to three universities, Ulster, Cambridge and Toronto, this study provides examples of effective practice in the area of the exploitation of Information and Communication Technology for language learning and teaching. It draws on the experience of these three institutions, as well as the findings of current literature in this area, in order to establish a set of essential criteria that institutions need to meet when creating a computer-based environment. Although these criteria are based on experience with language-learning environments, they are essentially generic in nature and may be applied to other computer-based learning environments.*
