

The Prince And The Midwife

Originally published 1995 *The Making of Man-Midwifery* looks at how the eighteenth century witnessed a revolution in childbirth practices. By the last quarter of the century increasing numbers of babies were being delivered by men – a dramatic shift from the women-only ritual that had been standard throughout Western history. This authoritative and challenging work explains this transformation in medical practice and remarkable shift in gender relations. By tracing the actual development and transmission of the new midwifery skills through the period, the book addresses both technological and feminist arguments of the period. The study is distinctive in treating childbirth as both a bodily and a social event and in explaining how the two were intimately connected. Practical obstetrics is shown to have been shaped by the social relations surrounding deliveries, and specific techniques were associated with distinctive places and political allegiances. The book studies how increasing numbers emergent male-midwives had overtaken women in the skill of delivering children and how as such expectant mothers chose to use these male-midwives, thus heralding the growth of male-midwives in the period.

The Gynaeciorum libri, a compendium of ancient and contemporary texts on gynaecology, is the inspiration for this intensive exploration of the origins of a subfield of medicine. Focusing on its readers in the period from the eighteenth to the nineteenth century, when men and women were in competition for control over childbirth, Helen King sheds new light on how the claim of female difference was shaped by specific social and cultural conditions.

This volume explores the unique challenges midwifery graduates face as they move into practice. It identifies the similarities and differences in midwifery education, regulation, and clinical practice faced by graduate midwives in all continents, examining the various support systems available for graduate midwives in many countries, and identifying the common strategies (formal and informal) and approaches that have proved to be effective in supporting

midwifery graduates. The book volume brings together the experiences of new midwives starting out in registered practice, to share the challenges and triumphs during their transition to confident practitioners. It identifies, explains and details both established and innovative new mechanisms in place to support new midwives in each country, and examines the effects the experiences of transitioning to practice may have on future professional practice, resilience and sustainability. Lack of support during the new-graduate transition to practice has been associated with early attrition from the midwifery profession. Stress, disillusion, and horizontal violence have been identified as factors that influence midwifery attrition rates. Exploration of the various support mechanisms currently available in different countries may stimulate the sharing of best practices in providing new midwives with transition to practice programmes and generate further research. Each chapter is harmonized to facilitate the comparison between countries, and the maternity services context is explained using each country's specific legislation, regulation and registration of midwives. The preparation of midwifery students for qualified practice is outlined to explain how midwifery students are trained and socialized into the profession, mentored in their placements and then transitioned to registered midwife status. This book appeals to midwives, managers, educators, and newly graduated interested in international midwifery practice.

This book, the first to describe women medical practitioners other than midwives in the colonial period, emphasizes that medical care was part of every woman's work. The Healer's Calling uses memorable anecdotes, engaging characters, and medical oddities to tell the fascinating story of the practice of household medicine in early America. Rebecca J.

Tannenbaum points out that housewives provided much of the medical care available in the seventeenth century. Elite women cared for the indigent in their towns and used medical practice to make influential connections with powerful men; "doctresses" or "doctor women" supported themselves with their practices and competed directly with male physicians; and midwives were crucial "expert witnesses" in cases of fornication, murder, and witchcraft. Yet there were limits to the authority of women's healing communities, with consequences for those who overstepped the bounds. By setting women's practice in the context of contemporary medicine, gender roles, and community norms, Tannenbaum also reveals the relationship between women's medical practice and witchcraft accusations. Tannenbaum examines colonial America's full range of medical options—including the work of classically trained male doctors and male lay practitioners—with a keen eye to the interactions and tensions between men and women in the realm of healing.

A fascinating slice of social history - Jennifer Worth's tales of being a midwife in 1950s London, now a major BBC TV series. Jennifer Worth came from a sheltered background when she became a midwife in the Docklands in the 1950s. The conditions in which many women gave birth just half a century ago were horrifying, not only because of their grimly impoverished surroundings, but also because of what they were expected to endure. But while Jennifer witnessed brutality and tragedy, she also met with amazing kindness and understanding, tempered by a great deal of Cockney humour. She also earned the confidences of some whose lives were truly stranger, more poignant and more terrifying than could ever be recounted in fiction. Attached to an order of nuns who had been working in the slums since the 1870s, Jennifer tells the story not only of the women she treated, but also of the community of nuns (including one who was accused of stealing jewels from Hatton Garden) and the camaraderie of the midwives with whom she trained. Funny, disturbing and incredibly moving, Jennifer's stories bring to life the colourful world of the East End in the 1950s.

Midwives, Society and Childbirth is the first book to examine midwives' lives and work in the nineteenth and twentieth national and international scale. Focusing on six countries from Europe, the approach is interdisciplinary with the study of a diverse team of social, medical and midwifery historians, sociologists, and those with experience in delivering children. Questioning for the first time many conventional historical assumptions, this book is fundamental to a better understanding of the effect on midwives of the unprecedented progress of science in general and obstetric science in particular from the nineteenth century. The contributors challenge the traditional bleak picture of midwives' decline in the face of institutional obstetrics, technology, and the growing power of the medical profession, while stressing the importance of regional influences. Contributors: Anne Marie Rafferty, Philadelphia, Dr Hilary Marland, Erasmus Universiteit Rotterdam, Dr Irvine Loudon, Oxfordshire, J Mottram, Wellcome Unit for the History of Medicine
