

## World Engine Digest

*1970- issued in 2 vols.: v. 1, General reference, social sciences, history, economics, business; v. 2, Fine arts, humanities, science and engineering. For anyone curious about the nuts and bolts of human ingenuity, How Things Are Made is a fascinating exploration of the process behind the manufacture of everyday items. What are bulletproof vests made of? How do manufacturers get lipstick into the tube? How many layers are there in an iPhone screen? The answers to these questions and so much more fascinating information can be found in How Things Are Made, a behind-the-scenes look at the production everyday objects of all kinds, from guitars, sunscreen, and seismographs to running shoes, jet engines, and chocolate. Thoroughly revised and redesigned from the best-selling 1995 edition, How Things Are Made also contains three new entries by author Andrew Terranova. However, each page still contains informative step-by-step text along with detailed but easy-to-follow illustrations, diagrams, and sidebars to tell the stories behind the things we sometimes take for granted. For example, did you know that Edison didn't really invent the light bulb? Or that the first bar code was on a pack of Wrigley's Spearmint gum? Or that a maple seed inspired the design for the helicopter? Discover these fascinating anecdotes and much more in How Things Are Made.*

Information Sources in Energy Technology presents the major sources in the field of energy technology. The book is comprised of 16 chapters that are organized into three parts. The first part covers energy in general and discusses both local and international agencies that deal with energy technology along with its primary and secondary sources. The next part deals with fuel technology; this part details combustion, steam and boiler plant, electrical energy, and energy conservation. The last part talks about specific energy sources, including nuclear, solar, and geothermal. The text will be of great use to individuals involved in energy industry. Scientists and engineers involved in energy projects will also benefit from the book.

Now in its 76th edition, Gun Digest 2022 is the most-anticipated annual guide to all things new and exciting in the world of firearms. Informative and entertaining articles by the top writers in the field cover every aspect of guns and shooting, including hunting, personal defense, target practice, gun making and collecting. Historical articles provide

a look at the role firearms have played in the United States and around the world. "The World's Greatest Gun Book" has remained true to its roots, year after year, for more than three quarters of a century. Gun Digest offers original, expertly written content in what is truly the most comprehensive collection of firearms information in print today.

*A comprehensive guide to the local, trade and professional directories of the British Isles.*

*Covering 32 Eastern and Western European countries, this encyclopedia presents a wide range of business information sources, under approximately 1000 alphabetically arranged business subjects. From accounting to the video recording industry, this volume includes the most up-to-date topics relevant to today's researcher. Within each topic category, entries are divided geographically and then by type of resource.*

***In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth***

**observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.**

**Cette bibliographie commentee touche tous les domaines du savoir humain, soit de l'Art a la Zoologie;elle signale les ouvrages les plus importants soit des bibliographies, des index, des encyclopedies, des dictionnaires, des guides, des revues etc dont le support ed'information est soit du papier, soit un cd-rom, soit une base de donnees en ligne directe, soit un microforme ect. L'objectif du guide Walford est de devenir La source d'information sur tout type de reference, nonobstant le support technique.**
